

B. C. Henderson
High School Principal

Education of today is concerned more with boys and girls than it is with books. We are not satisfied with teaching mere subject matter but are interested, as well, in the development of the whole personality. It is my belief that Wink High School has developed a program of education which is rich in tradition, modern in methods, and distinctive in its quality. Therefore, we challenge you students that when you have completed what you thought you couldn't, attack another impossibility.

Oliver J. Bierschwale
Elementary Principi

The importance of education is greater in the world today than at any time in history. There are powers in the world which are striving to destroy our education and way of life. Only through constant vigilance and continued education can we hope to remain a free nation. It is my hope that the American people will continue to realize the necessity for maintaining good public schools.
