SUPERINTENDENT'S MESSAGE

Recent events and space*travel developments make the course of the future more uncertain. As the world is thrown in the confusion of conditions never before encountered, a new and greater responsibility is thrust upon the individual to prepare himself to meet the challenge of those new demands.

The easiest course has always been to let one's environment mold him and to conform to the forces about him. To do so is to lose the divine and unique qualities of the individual spirit.

As we enter the race for scientific superiority, which seems essential for survival, there is a great danger that the value and worth of the individual will be relegated to a position of lower rank. May each of you realize your own worth and potential as an individual in aiding in the continuation of using science and knowledge to the good and service of mankind.

I. R. Huchingson
