

40 Hour Week

Getting a taste of the real world, students enrolled in job-related classes to develop skills for the future. Courses in business, shop, VAC, computers and drafting provide training that enables graduates to gain employment in lifetime careers or as they pursue further education. Skills to find jobs such as welding, woodworking, typing, accounting, computers, and drafting allow students to leave school with a sense of responsibility and good work ethics.

Coach Danny Thomas's drafting class is really into its drawing, but in the background Isreal Rios finds something interesting out the window.

By special request of Leigh Ann Powell and Twila Collins, Accounting II was offered and taught by Mrs. May Kay Roensch.

Ken Lofgren is trying to figure out what Claudia Valeriano is doing during fifth period computer class.

A, A, A, J, J, J, . . . Mrs. Roensch's typing class is hard at work learning the home row keys.

Danny Thomas's welding class is wondering how that bright light connects metal.
