

Computers have become a big part in many school projects, especially research papers. Sophomores Desiree Bickle, Amber Loftin, Greg Smith, and Alan Watts enjoy working at the computer in Mrs. Baker's room. Computers were added to the high school library at the beginning of the year, and different programs including *Infotrac* and *College View* were of great benefit to students and teachers alike.

A popular project for seventh graders is the 'Flour Baby' assignment in life management skills. Teacher Ms. Vonda Vernor says, "The project is an excellent way to de-glamorize teen-age pregnancy. It shows each student what it is like to be responsible for someone other than his or herself." Senior teacher's aide, Clifford Milligan helped construct a flour baby, while seventh graders Jeremy Smith and Todd Warren watch Alicia Sparks dress her baby. Skylar Jamison and Clayton Hawkins admire each others 'newborn'.

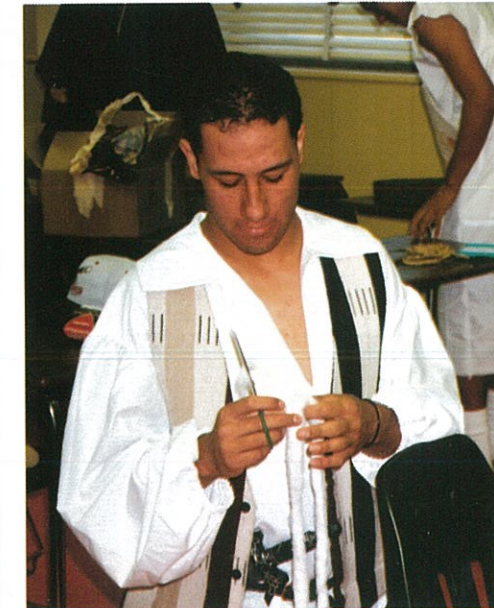

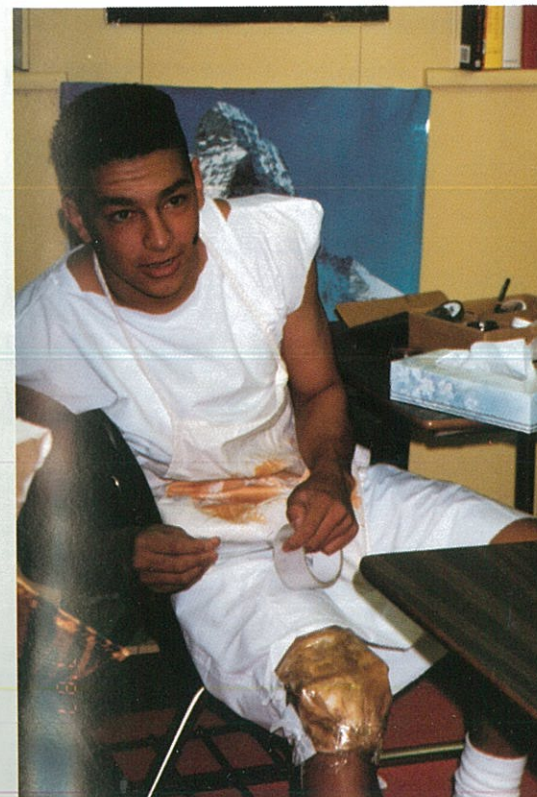

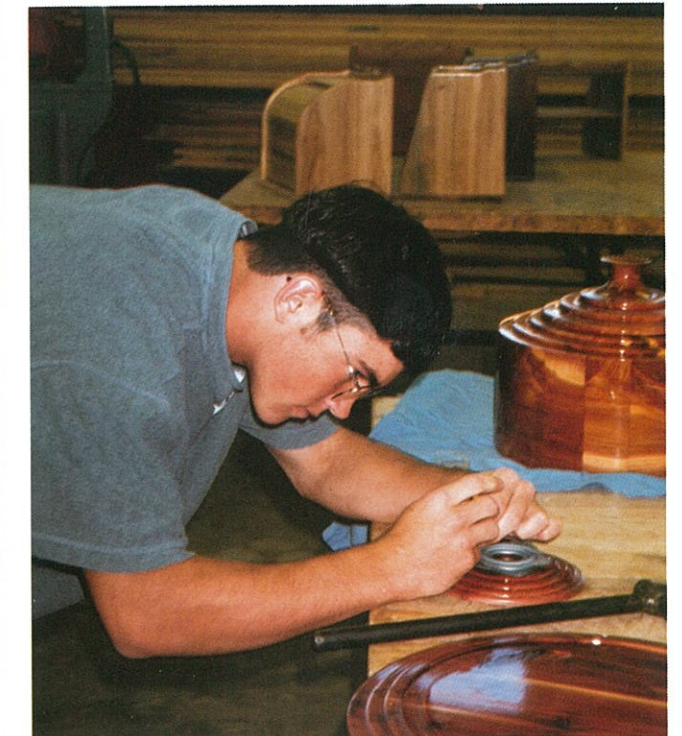

Senior Frank Kelton is busy preparing a fruit salad in his comprehensive home economics class. The class cooked one day a week giving students the opportunity to plan menus, prepare food, and eat!

## Special Projects Spark Interest in Learning

In the woodshop, Mr. Danny Thomas teaches skills that can be carried into the workplace or throughout life as an enjoyable hobby. Students get hands-on experience working with tools as they produce beautiful wooden creations. Senior Sara Peaugh and sophomore Brandon Thompson concentrate on completing their projects with precision.

"Seeing the characters come to life rather than just reading about them helped me get them straight in my mind," said Kim Hawkins who portrayed the Wife of Bath.

Ms. Chrissie Ethridge's senior English classes enjoyed dressing up as characters from *The Canterbury Tales*. Jason Moya and Robert Rios get ready for a day dressed as the Cook and the Franklin.
